Memorandum to

*TF-12*

I estimate that 272 feet of Acme Steel, slotted angle steel, would be needed to provide a \*11' 10" x 8' x 2' shelving rack.

This would permit for 7 shelves and a top shelf.

If my estimate is correct this would mean that 2 bundles, of 120' each, and 32' of a third bundle would be needed. It seems a shame to have to purchase a third bundle for only 32', possibly not being able to use the remaining 88'.

It may be that  knows where he could pick up the 32', then 2 bundles would suffice.

The plywood shelving would require six (6), 4' x 8' x  $\frac{1}{2}$ " sheets.

I would estimate that the entire cost, provided you purchase the 3rd bundle would approximate \$100.00

suggested you order item 300-104, 12 foot lengths, 120 feet per bundle, at a cost of \$26.05 per bundle.

Please check my estimates before you get  to order. If there is a discrepency in my estimating, please call me.

Attachment (Acme Steel Catalog)

\*I used 11' 10" because as we measured the vault, a 12' span would not quite fit.
